

## **Information Withheld**

Some parts of this information release would not be appropriate to release and, if requested, would be withheld under the Official Information Act 1982 (the Act).

Where this is the case, the relevant sections of the Act that would apply have been identified.

Where information has been withheld, no public interest has been identified that would outweigh the reasons for withholding it.

Where information has been withheld, a numbered reference to the applicable section of the Act has been made. For example, a [33] appearing where information has been withheld in a release document refers to section 9(2)(f)(iv).

Key to sections of the Act under which information has been withheld:

- [33] 9(2)(f)(iv) - to maintain the current constitutional conventions protecting the confidentiality of advice tendered by ministers and officials
- [36] 9(2)(h) - to maintain legal professional privilege.

# Regulatory Impact Statement: Child support pass-on

## Coversheet

Purpose of Document	
Decision sought:	Analysis produced for the purpose of informing the Cabinet pre-budget decision on regulatory changes to give effect to child support pass-on
Advising agencies:	Ministry of Social Development and Inland Revenue
Proposing Ministers:	Hon Carmel Sepuloni, Minister for Social Development and Employment Hon David Parker, Minister of Revenue
Date finalised:	16 March 2022
Problem Definition	
<p><sup>1</sup> child support<sup>2</sup> paid by the other parent (liable parent) is not passed on to them, the carer of that child (receiving carer). Instead, child support payments are made to Inland Revenue and are retained by the Government to offset the cost of paying benefits. Child support is passed on to other recipients of benefits, for example, re-partnered parents or clients only receiving supplementary assistance (who may also be working).</p> <p>There is a high incidence of material hardship amongst beneficiaries with dependent children and passing on child support payments would increase the incomes of many sole parent beneficiaries and contribute to the Government's Child Poverty targets to reduce the number of children in poverty.</p> <p>For parents in hardship with an obligation to pay child support, this obligation is not recognised when applying for Temporary Additional Support (income- and asset-tested hardship assistance). This can limit the support they receive.</p>	
Executive Summary	

<sup>1</sup> [36]

<sup>2</sup> Except when a child support payment exceeds the total main benefit a sole parent beneficiary is paid, where the excess is passed on. However, it is uncommon for child support payment to exceed the sole parent rate of benefit is \$406.78 a week.

Currently, parents and carers who are social security beneficiaries under the Child Support Act 1991<sup>3</sup> must apply for child support using a formula assessment unless they have grounds for exemption<sup>4</sup> or were not required to do so for other reasons<sup>5,6</sup>. The child support payments made to Inland Revenue for sole parent beneficiaries are retained by the Government to offset the cost of paying benefits.<sup>7</sup>

However, other beneficiaries, such as parents on a couple's rate of benefit are not required to apply for a formula assessment<sup>8</sup> (although they may choose to). Any child support payments made by liable parents to Inland Revenue are passed on to them and treated as income for welfare purposes.

The policy objectives of passing on child support are to:

- treat sole parents more fairly and minimise the creation of new inequities,
- increase the adequacy of financial resources for sole parents to support children,
- reduce the number of children in poverty, and
- reduce barriers for liable parents to pay child support.

#### *Options not considered for assessment*

The following two options were not considered for the following reasons:

- Retaining child support payments of all beneficiaries – overall outcomes not an improvement over the status quo.
- Not treating child support as income for benefit abatement purposes – would operate similarly and effectively have the same outcomes as Option 3.

---

<sup>3</sup> A social security beneficiary is defined in section 2 of the Child Support Act 1991 as a person in receipt of a social security benefit and a social security benefit is defined as including Sole Parent Support, Unsupported Child's Benefit and single rates of Supported Living Payment, Jobseeker Support and Young Parent Payment.

<sup>4</sup> Grounds for exemption include:

- insufficient evidence available to establish who the other parent is,
- the sole parent is taking active steps to identify who the other parent is,
- there is a risk of violence if the sole parent complies with the requirements,
- there are other compelling circumstances and no real likelihood of child support being collected, or
- the child was conceived as a result of incest or sexual violation.

<sup>5</sup> Except, when the sole parent rate of benefit is:

- a Supported Living Payment on the grounds of caring for a person who has a health condition or a disability that requires full-time care or
- Jobseeker Support on the grounds of hardship payable to full-time students between academic years.

<sup>6</sup> Section 9 of the Child Support Act 1991 states that a person must apply for child support at the same time as a benefit application is made, unless they meet specific criteria in section 9(5B), and they are not required to apply. These applicants may only apply for a formula assessment via Inland Revenue.

<sup>7</sup> If the child support paid is greater than the benefit, the difference is paid to the beneficiary and is not treated as income for main benefit purposes (it is still considered as income for Temporary Additional Support, Special Benefit and Childcare Assistance purposes).

<sup>8</sup> Formula assessments are an assessment by Inland Revenue of the amount of child support payable using the child support formula set out in the Child Support Act 1991. Inland Revenue collects payments from parents who are liable to pay child support (liable parents) and distributes them to the carers of children for whom the payments are made (receiving carers).

To address problems with the current system, three options have been considered alongside the status quo (Option 1):

*Option 1: Status quo – no <sup>[36]</sup> policy change*

*Option 2: Full child support pass-on – treating child support as income for the sole parent beneficiary (preferred option by the Ministry of Social Development (MSD))*

Child support payments would be passed on to sole parent beneficiaries instead of being retained by the Government to offset the cost of benefit payments. If a client's income (including child support) reaches the abatement threshold, the amount of benefit paid will reduce. Option 2 will increase the incomes of many sole parent beneficiaries and their families and will remove the inequity faced by sole parent beneficiaries. It is MSD's preferred option because it provides the best overall outcomes without creating any further equity issues (i.e., treating child support differently from other forms of income or sole parent beneficiaries differently than others).

*Option 3: Full child support pass-on – treating child support as income for the child*

Child support payments would be disregarded as income for the parent or the carer and considered as income for the child under the benefit system. Child support would continue to be treated as income for Working for Families tax credit purposes.

[36]

. It would have a greater impact on child poverty reduction levels.

However, Option 3 is a significant policy shift from the general purpose of the welfare assistance for clients to use all available resources before they seek financial assistance. It would also raise wider questions around what is considered income in the welfare system

<sup>[36]</sup>

*Option 4: Partial child support pass-on*

Partial pass-on would mean that instead of the full amount of child support being passed on to receiving carers, a maximum amount (for example, \$20 per week) would be passed on, and any remainder would be retained by the Government to offset the cost of these benefits. However, this would not treat sole parent beneficiaries fairly as it would still differ from the treatment of child support income for re-partnered parents.

<i>Options 2-4 share these same policy requirements<sup>9</sup></i>	<i>Options 2 and 4 have these similar IT infrastructure and business process requirements</i>
<ul style="list-style-type: none"> <li>• Removing the obligation for social security beneficiaries to apply for child support.</li> <li>• Retaining child support for recipients of the Unsupported Child's Benefit and Foster Care Allowance.<sup>10</sup></li> <li>• Making formula assessed child support an allowable cost for liable parents applying for Temporary Additional Support.</li> </ul>	<ul style="list-style-type: none"> <li>• Automation of information sharing and business processes to support passing on child support. This is dependent on changes to information sharing agreements and other legislation.</li> <li>• Child support being charged forward, as income, over the following four or five weeks of benefit payments, from when the payment is made.</li> </ul>

### **Consultation has shown general support for full child support pass-on**

In 2018, the Minister for Social Development commissioned the Welfare Expert Advisory Group (WEAG) to undertake a broad-ranging review of the welfare system and advise Government on the future of New Zealand's welfare system. WEAG consulted extensively, hearing from 3,000 New Zealanders from across the welfare system, including recipients of benefits, beneficiary advocates, and MSD staff. Many respondents thought that child support payments from the liable parent should be passed on to the receiving carer, which is what WEAG recommended<sup>11</sup> and is achieved via the Options 2 and 3. <sup>1261</sup>

Welfare advocacy groups, commissioned expert panels, and academics have all expressed the need for child support to be passed on in full (Options 2 and 3) or partially (Option 4) as they expect it will reduce child poverty rates and prioritise the child's wellbeing.

### **The potential impacts of Option 2 [MSD's preferred option]**

*There will be increased financial resources for sole parent families*

Under Option 2<sup>12</sup>:

- 41,550 sole parent families will benefit financially by an average of \$65 per week, with a median gain of \$24 per week,
- 5,200 sole parent families will see no immediate gain due to the child support payments abating their financial assistance,
- 4,000 sole parent families will see no immediate gain because the liable parent does not pay child support, despite the obligation to do so, and
- 50 sole parent families are expected to lose financially from child support pass-on due to a combination of factors largely related to supplementary or hardship assistance.

The following population groups stand to benefit:

- women, as they make up 88 percent of all sole parent beneficiaries,
- Māori families by an average of \$52 per week and a median gain of \$20 per week,
- Pacific families by an average of \$69 per week, with a median gain of \$33 per week, and

- disabled people (receiving Supplementary Living Support<sup>13</sup>) by an average gain of \$76 and a median gain of \$24 per week.

*There will be a reduction in child poverty levels*

It is estimated that child support pass-on will reduce child poverty by around 7,000 (+/- 2,000) children on the fixed-line AHC50 measure,<sup>14</sup> and by around 5,000 (+/- 2,000) children on the BHC50 measure<sup>15</sup> in the 2023/24 financial year.<sup>16</sup>

*Liabable parents have an increased incentive to make child support payments*

Research suggests<sup>17</sup> that when child support is passed on there is an increased incentive, and therefore increased likelihood, of liable parents to pay child support payments. It can be inferred that this is likely due to the increased willingness of liable parents to pay child support when they can see that their child will receive the benefit of their financial support.

*In addition to the outcomes already mentioned, we anticipate that the following outcomes will result from the proposal based on international research*

Additional outcomes, include, improved:

- health and wellbeing outcomes for sole parent beneficiaries and their families,
- cognitive development and school achievement in childhood,
- education in adulthood, and
- relationships between liable parents and their children.

[36]

<sup>9</sup> Based on the previous decisions by the Minister for Social Development, and the Minister of Revenue (Hon Stuart Nash at the time).

[33]

<sup>11</sup> Implementing child support pass-on was recommendation 27, one of the 42 recommendations of WEAG in its 2019 report '*Whakamana Tāngata – Restoring Dignity to Social Security in New Zealand*'. WEAG recommended that child support collected be passed on to receiving carers including recipients of the Unsupported Child's Benefit. As per footnote [13], child support pass-on for caregivers receiving the Unsupported Child's Benefit is being considered as part the long-term work to reform the system of financial assistance and support for caregivers.

<sup>12</sup> The impacts of Option 2 were modelled by matching MSD client data with recipients of child support in the Inland Revenue system as at September 2021.

<sup>13</sup> Supported Living Payment is the main benefit type for people who have a long-term health condition or disability.

<sup>14</sup> AHC50 measures the number of children in households with incomes much lower than a typical 2018 household, after they pay for housing costs, and is measured by the threshold line set at 50 percent of the median income in 2017/2018 (base financial year), after housing costs are removed.

<sup>15</sup> BHC50 is a moving-line income measure, with the poverty threshold taken the year the data is gathered (low income before housing costs – moving-line measure). BHC50 measures the number of children in households with much lower incomes than a typical household, and is measured by the threshold line set at 50 percent of the median household income in the year measured.

<sup>16</sup> These figures are based on Treasury's tax and welfare analysis modelling.

<sup>17</sup> Cancian, M., Meyer, D. R. & Caspar, E. (2008). *Welfare and child support: Complements, Not Substitutes*. Journal of Policy Analysis and Management, 27(2), 354-375.)

The overall cost to the Government of the preferred option is estimated to be \$354.27 million over the forecast period 2021/2022 to 2025/2026:

<p><u>Costs</u></p> <ul style="list-style-type: none"> <li>• \$458.63 million to the Government for no longer retaining child support, and</li> <li>• \$25.42 million to enable child support liability to be considered an allowable cost for Temporary Additional Support (and Special Benefit) purposes.</li> </ul>	<p><u>Government investment</u></p> <ul style="list-style-type: none"> <li>• \$3.65 million in one-off costs (business design and IT requirements, monitoring and evaluation, FTEs for implementation),</li> <li>• \$42.10 million in ongoing costs (communication, depreciation, capital charge, FTEs for contact centres, processing staff and other support staff), and</li> <li>• \$20.20 million for the IT build.</li> </ul>
<p><u>Savings</u></p> <ul style="list-style-type: none"> <li>• (\$174.15) million of benefit abatement, and</li> <li>• (\$21.58) million due to child support being treated as income for the Income-Related Rent Subsidy (Vote Housing and Urban Development)</li> </ul>	

### View of the officials

Inland Revenue supports the proposal to pass child support payments on to sole parent beneficiaries in full. This will ensure that money collected by Inland Revenue for the support of children goes to the caregiver <sup>[36]</sup>

The treatment of the payment in the benefit system is primarily the responsibility of the MSD to advise on.

MSD prefers Option 2 because it meets all of the policy objectives and delivers the highest criteria of all options assessed.

### Limitations and Constraints on Analysis

MSD and Inland Revenue are responsible for the analysis and advice set out in this Regulatory Impact Statement, except as otherwise explicitly indicated. The analysis and advice have been produced for the purpose of informing key policy decisions to be taken by Cabinet.

Based on the advice of officials, previous decisions by the Minister for Social Development, and the Minister of Revenue have limited the scope of the options considered. These are decisions that:

- the obligation for sole security beneficiaries to apply for child support would be removed (under section 9 of the Child Support Act 1991), enabling them to choose not to apply for or to revoke child support, and
- recipients of the Unsupported Child's Benefit<sup>18</sup> are not included <sup>[33]</sup>

<sup>18</sup> The review also involves the Foster Care Allowance, which Inland Revenue does not retain child support for.

These decisions are therefore reflected in all options except the status quo (Option 1).

The decision to remove the obligation for these beneficiaries to apply and undergo a formula assessment was made to give parents more flexibility to make child support arrangements that suit their circumstances (formula assessment, voluntary agreement, or private agreement). This decision reinforces the inherent mana of clients through preserving their right to exercise greater choice and control over solutions that work best for them. It also aligns the treatment of sole parent beneficiaries with re-partnered beneficiaries. Previously, a client's decision not to apply for child support or to revoke an existing arrangement could impact the financial assistance they received. In 2020, the Government removed the sanction (reduction of benefit rate) imposed on sole parents receiving a benefit who did not have grounds for exemption<sup>19</sup> or were not required for other reasons<sup>20</sup> so were required to apply for child support but had not done so.

For the Unsupported Child's Benefit and the Foster Care Allowance<sup>21</sup>, child support is also currently retained by the Government to offset the cost of financial assistance. Ministers agreed not to pass-on child support to these recipients as part of this project, [33]

Changes to the policy settings and rules for assessing child support payment obligations (using a formula assessment or voluntary agreement) are not in scope for any of the proposed options.

Based on the advice provided by officials, previous decisions were made by the Minister for Social Development<sup>22</sup> and the Minister of Revenue, which limited the analysis of particular options. These Ministers indicated the following preferences:

- in December 2018, for child support to be passed on, [36] (Options 2 and 4) in preparation for the 2020 budget process [REP/18/10/1438 and IR2018/697 refer], and
- in June 2021, the Minister for Social Development and Employment agreed that child support be passed on in full [36] (Option 2), however the Minister of Revenue supported an exploration of options to simplify the design

---

<sup>19</sup> Grounds for exemption include:

- insufficient evidence available to establish who the other parent is,
- the sole parent is taking active steps to identify who the other parent is,
- there is a risk of violence if the sole parent complies with the requirements,
- there are other compelling circumstances and no real likelihood of child support being collected, or
- the child was conceived as a result of incest or sexual violation.

<sup>20</sup> Except, when the sole parent rate of benefit is:

- a Supported Living Payment on the grounds of caring for a person who has a health condition or a disability that requires full-time care or
- Jobseeker Support on the grounds of hardship payable to full-time students between academic years.

<sup>21</sup> Caregivers receiving the Foster Care Allowance are not eligible to apply for child support directly. Oranga Tamariki—Ministry for Children may apply for child support for a child or young person in its care, and any payment is passed on from Inland Revenue to Oranga Tamariki—Ministry for Children.

<sup>22</sup> Hon Carmel Sepuloni was the Minister for both decisions but initially held the portfolio Minister of Social Development, and subsequently (also currently) Minister of Social Development and Employment.

(included Option 3). Due to time constraints, options to simplify the proposal were not provided in further advice to Ministers [REP/21/5/559 and IR2021/260 refer].

In relation to the June 2021 advice, the costings of the proposed alternatives were not undertaken and have not been provided for this assessment. This significantly limits the depth of comparison of costs of delivery and impact analysis between the preferred option (Option 2) and Options 3 and 4. However, it does not limit the comparison between Option 2 and Option 1 (the status quo).

### **Assumptions underpinning the impact analysis**

A number of assumptions used for the modelling analysis have also been used to cost the operational and implementation impacts for both MSD and Inland Revenue. There is likely to be a high level of complexity given the need to work across MSD and Inland Revenue's systems.

#### *There are assumptions made with respect to the data and modelling*

We have high confidence in the number of sole parent beneficiaries affected, as child support is currently withheld by Inland Revenue for these parents. The analysis is based on snapshot data from September 2021 shared between Inland Revenue and MSD, matching those receiving or paying child support in the Inland Revenue system with sole parent beneficiaries in the MSD system. The data captured has been used to project the impacts of Option 2 (the preferred option) and:

- uses the last year of payment data to establish 'real' payment/collection percentages,
- uses 2021 payment rate percentage where client data does not exist,
- assumes implementation on 1 July 2023,
- assumes child support will be passed on in full (not partial),
- assumes child support passed on will be treated as income for assessing benefit payments and Working for Families tax credits (when assessed by Inland Revenue), and that an expanded information exchange will be required between Inland Revenue and MSD to support this,
- assumes child support payments made in relation to recipients of Unsupported Child's Benefit or the Foster Care Allowance will continue to be retained by the Government,
- assumes no change to other child support settings (such as formula assessments or voluntary agreements),
- assumes MSD and Inland Revenue will work together on implementation planning to fully understand the impacts and interactions between their respective systems in respect of child support payments passed on from Inland Revenue,
- does not anticipate any change in collection percentages, and
- assumes child support payments increase alongside average wage increases.

Risks and challenges around child support pass-on primarily relate to the assumptions that have been built into the modelling and breakdown of costs for each agency. Changes to these underlying assumptions may have differing impacts on Inland Revenue and MSD.

The method used to estimate the reduction in child poverty is non-standard. It used the characteristics of potential recipients of child support pass-on as derived from administrative data to estimate recipients in Treasury's Tax And Welfare Analysis model.

Child poverty estimates are subject to significant uncertainties and this non-standard method increases the uncertainty.

The behavioural changes of sole parents who may be eligible to receive child support pass-on cannot be accurately modelled, for example, if there is an increase in private agreements<sup>23</sup>.

*This modelling cannot fully account for how the variability of payment impacts incomes for sole parent beneficiaries*

Increases in incomes for sole parent beneficiaries will depend on the amount of child support paid. The ability of liable parents to pay will directly impact the size and consistency of payments to sole parent beneficiaries. The formula assessment determines the payment amount. If the liable parent does not meet their payment obligation, this will impact the consistency of the sole parent beneficiary's income. When the liable parent does pay arrears, due to the combination of their regular payment and the arrears, the sole parent rate of benefit may be further abated. Due to the information available and the limits on modelling, the full impacts of this variability are unable to be represented.

*This modelling cannot determine the impact of child support payment on client benefit debt*

The modelling does not take into account debt creation as a result of variability in child support payments as it assumes a consistent ongoing payment level based on individual payee payments over the prior financial year. The variability of these payments is unable to be modelled at this time.

The impact of the new policy settings on debt will need to be identified and mitigated/minimised through the development of legislation, operational policy changes, business process design, and IT infrastructure.

*There are risks to realising the benefits of passing on child support*

The realisation of increases of income for sole parent beneficiaries is conditional on the arrangement and payment of child support. Since early 2020 we have seen a significant reduction in the number of child support applications made by sole parents. The reduction was due to inaccessibility for clients to apply for child support as a result of COVID-19 restrictions, but soon after we had the introduction of the removal of the sanction. Child support applications are still lower than pre-covid levels however we cannot confirm whether the reduction is related to the removal of the sanction or the changes in processes to collect the child support applications (due to COVID-19). It is possible that the removal of the obligation for sole parent beneficiaries to apply would reduce the number of formula assessment-based child support applications.

However, we are unable to determine whether this would be a decrease for all forms of child support arrangements as clients are no longer sanctioned for not applying for child support and could arrange child support privately without impacting their welfare assistance (if they do not declare this income to MSD). Further, the Government's intention is to empower sole parent beneficiaries to make their own decisions about applying for

---

<sup>23</sup> Private agreements are an agreement between the parents for the care of a child, with no involvement from Inland Revenue. The agreement could be for regular or ad-hoc, financial or in-kind assistance to the receiving carer.

child support. This also aligns the treatment between sole parent beneficiaries and re-partnered beneficiaries.

#### *Some impacts on clients will be challenging to monitor*

Two reasons have been identified as making the monitoring of long-term impacts challenging: the potential increase in uptake of private agreements, and the impact on long-term goals such as improved health or mental wellbeing outcomes. The latter will be challenging to attribute directly to passing on child support, given the length of time to realise these goals and the unknown impact of future changes to the child support and welfare systems.

First, we are removing the obligation for social security beneficiaries to apply for a formula assessment which will change how clients arrange child support, providing them with new alternatives through voluntary agreements or by privately making child support arrangements. We have no data to support clients' preferences to apply or not to apply or child support, and what form of child support arrangement they would prefer. Once the obligation to apply for child support is removed, there may be a decrease in formula assessments, and an increase in voluntary and private agreements. However, private agreements are external to MSD and Inland Revenue's systems and officials will be unable to monitor this.

Second, it will be challenging to monitor the effectiveness of the long-term goals of passing on child support. This includes the goals of improved health and mental wellbeing outcomes. Over the length of time that the goals are monitored (for example, over 10 years), it will be difficult to attribute improvements directly to passing on child support. It is reasonable to assume there will be a range of contributing factors and likely changes in Government policy, including changes to income support for sole parent beneficiaries.

#### *Limits on consultation and stakeholder engagement*

While WEAG consulted the public in 2018, officials have been unable to separately consult on the proposed change. The Minister for Social Development and Employment and the Minister of Revenue wish to make the change public through the Budget 2022 process so further consultation with the affected group has not been possible. Further consultation is expected via the select committee process as part of the passage of legislative changes required to pass on child support to sole parent beneficiaries.

#### **Limitations and constraints on Ministers' confidence**

The overall impact of these limitations and constraints does narrow the scope of what is being considered for child support pass-on, and the depth of comparison between options. However, we consider the data is reliable as an indicator of impacts. Ministers can be confident that the rigour of the analysis has been applied.

Bede Hogan  
Policy Manager  
Income Support Policy  
Ministry of Social Development

16 March 2022

## Quality Assurance

Reviewing Agency: MSD and Inland Revenue

Panel Assessment & Comment:

The review panel considers that it partially meets the Quality Assurance criteria.

The Regulatory Impact Assessment demonstrates a convincing problem definition and clearly sets out a range of options and evaluation criteria. Though there has not been public consultation through this policy development process specifically, the document outlines the relevant commentary and consultation that has previously occurred and clearly demonstrates various stakeholders' views. For the majority of the proposal costs and benefits are clearly set out with supporting evidence (including monetisation where appropriate), and data constraints and limitations explained and analysed. Implementation risks and mitigations are discussed thoroughly.

The method in which income will be charged (forward over four to five weeks automatically) is attested to be necessary for the policy change to be operationally feasible, and qualitative benefits for clients are clearly articulated. However, the impact analysis for this choice does not demonstrate the financial impacts for child support recipients, and the qualitative discussion of the negative impacts is relatively limited.

## Section 1: Diagnosing the policy problem

**What is the context behind the policy problem and how is the status quo expected to develop?**

**Context within which action is proposed**

*It is mandatory for sole parent beneficiaries to apply for child support*

When a receiving carer applies or reapplies for a Sole Parent Support, the Unsupported Child's Benefit or the sole parent rate of Supported Living Payment, Jobseeker Support, Jobseeker Support Student Hardship, or Young Parent Payment, they are obligated to apply

for child support and undergo a formula assessment<sup>24</sup>. Child support paid on behalf of these clients to Inland Revenue is retained by the Government.<sup>25</sup> Child support payments to sole parent beneficiaries have historically been retained, and this has remained the policy throughout various reforms of the welfare system since the 1930s. The rationale is to offset the cost of the benefit that receiving carers get.

When a child support payment exceeds the total main benefit, the social security beneficiary is paid the amount of child support that exceeds their benefit payment. However, it is uncommon for child support payments to exceed the sole parent rate of benefit (\$406.78<sup>26</sup> a week as at 1 July 2021). These carers need to declare the child support they receive so the impacts to their benefit or supplementary assistance can be assessed.

Child support is not retained for re-partnered beneficiaries or for those only receiving supplementary assistance, and the amount received by the carer is considered income for benefit purposes.

*There are three types of child support arrangements:*

- **Formula assessments:** This is when Inland Revenue assesses the amount of child support payable using a formula to determine the payment obligation. It then collects the payment from the liable parent and pays it to the receiving carer or withholds it in the case of sole parent beneficiaries and recipients of the Unsupported Child's Benefit. The child support is paid to carers monthly.
- **Voluntary agreements:** Parents can come to an agreement between themselves on how much child support will be paid. Inland Revenue then collects and pays child support to the carer monthly. Generally, sole parent beneficiaries and recipients of the Unsupported Child's Benefit cannot enter a voluntary agreement, as they are obligated to apply for a formula assessment.<sup>27</sup>
- **Private agreements:** Parents can come to an agreement between themselves on the type, size, and frequency of support provided. The agreement could be for regular or ad-hoc, financial or in-kind assistance. This could, for example, include paying for regular schooling costs or one-off health costs. Inland Revenue do not collect or pay any support in this case. <sup>[36]</sup>  
beneficiaries are required to declare it as income if they are receiving income-tested assistance.

Formula assessments and voluntary agreements through Inland Revenue are both referred to as child support and are only identified separately where necessary in this regulatory impact statement. Private agreements are discussed separately when appropriate.

*There are strong links between child poverty and negative long-term outcomes*

There is a high incidence of material hardship amongst beneficiaries with dependent children:

---

<sup>24</sup> Unless the client has a voluntary agreement to pay more than formula assessment determines the liable parent should pay. This is uncommon.

<sup>25</sup> This does not include clients receiving Supported Living Payment on the grounds of caring for another person at a sole parent rate.

<sup>26</sup> From 1 April 2022 the sole parent rate paid weekly will be amended to gross \$511.65 and net \$440.96.

<sup>27</sup> Except when a person becomes a beneficiary and already has a voluntary agreement place that is higher than the formula assessment.

- In the working-age<sup>28</sup> population, approximately 28 percent of beneficiaries with children claim they have postponed or put off their visits to the doctor 'a lot' to keep costs down (compared to 6 percent of non-beneficiaries with children), and
- 44 percent of beneficiaries with children say they do not have enough money to meet every day needs such as accommodation, food, clothing, and other necessities (compared to 12 percent of non-beneficiaries with children).<sup>29</sup>

Material hardship is associated with poor outcomes for mothers and their children.<sup>30</sup>

### *Children who experience poverty are likely to have worse long-term outcomes*

Children and adolescents who experience poverty have worse cognitive, social-behavioural and health outcomes, in part because they have lower family incomes. The parent's inability to purchase resources for children is a stressor resulting from low income. Children that experience poverty are more likely to experience negative long-term outcomes in areas such as adult employment, education, income, health, and cognitive development.<sup>31</sup>

There is no single measure of poverty in New Zealand. The Child Poverty Reduction Act 2018 sets out a multi-level, multi-measure approach to measuring child poverty. The Child Poverty Minister has set targets for three primary measures. The first intermediate target period ended with the statistics reported for the year ended June 2021, showing the Government has made progress towards all three intermediate targets. As at June 2021 there are:

- 13.6 percent of children (156,700) lived in households with less than 50 percent of the median equivalised disposable household income before housing costs are deducted,
- 16.3 percent of children (187,300) lived in households with after-housing-costs equivalised disposable income that was less than 50 percent of the median after-housing-costs income in the baseline year, and
- 11.0 percent of children (125,700) living in households that experienced material hardship.<sup>32</sup>

### *The Welfare Expert Advisory Group consulted substantively, and recommended child support be passed on*

In 2018 the Minister for Social Development commissioned the Welfare Expert Advisory Group (WEAG) to undertake a broad-ranging review of the welfare system and advise Government on the future of New Zealand's welfare system. WEAG conducted an inclusive

<sup>28</sup> 16 – 64 years of age.

and consultative engagement process with opportunities for New Zealanders to provide input by survey, submissions, community forums, and hui. WEAG heard from nearly 3,000 New Zealanders from across the welfare system, including: recipients of benefits, beneficiary advocates, and MSD staff.

Feedback received during consultation and formulated in the WEAG's 2019 report found that the welfare system did not treat its clients with dignity and respect, and that changes were needed to treat people with more compassion and empathy. Many respondents thought that child support payments should be passed on to the receiving carer. Passing on child support was recommendation 27 of 42 made by WEAG in its 2019 report 'Whakamana Tāngata – Restoring Dignity to Social Security in New Zealand'. WEAG recommended that the payments be passed on to receiving carers and that these payments be treated as income for benefit abatement in the same way as wages (Option 2).<sup>33</sup>

Further consultation is expected via the select committee process as part of the consideration of the Bill required to implement the child support pass-on proposal.

#### *Wider support for passing on child support*

Welfare advocacy groups, commissioned expert panels, and academics have all expressed the need for child support to be passed on, but have not indicated a preference for in full (Options 2 and 3) or partial (Option 4) pass on. They expect it will reduce child poverty rates and prioritise the child's wellbeing.

- In 2011 the Child Poverty Action Group undertook an analysis in their report *Left Further Behind* and devoted a chapter to Reforming Child Support. They considered that “part or all of Child Support should be paid directly to the parent on a benefit”, that “Child Support reform must have the child's well-being at the centre, not the financial needs of the Government”.<sup>34</sup>
- In 2012 the Children's Commissioner commissioned the Expert Advisory Group on Solutions to Child Poverty. It recommended the government pass-on child support payments (Recommendation 13) to eligible sole parents who are on state-provided benefits, considering it the “practical, cost-effective and relatively inexpensive measure that will mitigate some of the worst consequences of child poverty.” They even suggested the government guarantee payment of child support regardless of whether the liable parent paid it (Recommendation 14) in order to reduce income inconsistency.<sup>35</sup>
- In his 2017 thesis, economist Michael John Fletcher determined “that pass-on would improve outcomes following separation in terms of reducing the decline in living standards, ameliorating poverty rates, and reducing the gap between parents with care of children (mostly women) and paying parents (mostly men).”<sup>36</sup>

### *International practice suggested some options to consider*

Comparable jurisdictions such as Australia and the United Kingdom operate a form of child support pass-on and do not retain payments to offset benefit costs. In the United Kingdom, child support is disregarded in the income test. In Finland and Germany, child support is passed on and is guaranteed by the government (that is, paid even if the liable parent does not pay), but is treated as income when calculating social assistance payments.<sup>37</sup>

### **Key features of the regulatory system and its objectives**

The Child Support Act 1991 contains legislative provisions:

- requiring child support to be retained when the receiving carer is paid Sole Parent Support, Unsupported Child's Benefit or the sole parent rate of: Supported Living Payment, Jobseeker Support, Jobseeker Support Student Hardship, or Young Parent Payment, and
- requiring sole parent beneficiaries to apply for a formula assessment with Inland Revenue.

Regulations under the Social Security Act 2018 set out the parameters for “allowable costs” for Temporary Additional Support.

## What is the policy problem or opportunity?

### Problem definition

Sole parent beneficiaries are treated differently on the basis of marital status, because child support paid by the other parent (liable parent) is not passed on to them, the carer of that child (receiving carer). Instead, child support payments are made to Inland Revenue and are retained by the Government to offset the cost of paying benefits. Child support is passed on to other recipients of benefits, for example, re-partnered parents or clients only receiving supplementary assistance (who may also be working).

There is a high incidence of material hardship amongst beneficiaries with dependent children and passing on child support payments would increase the incomes of many sole parent beneficiaries and contribute to the Government's Child Poverty targets to reduce the number of children in poverty.

For parents in hardship with an obligation to pay child support, this obligation is not recognised when applying for Temporary Additional Support (income- and asset-tested hardship assistance). This can limit the support they receive.

### Policy opportunity

There is a strong case for changing the policy to retain child support for sole parents, because the current settings are:

- not reflective of other developments and approaches in welfare system, <sup>1361</sup>
- unfair as child support is currently retained on an unequal basis, and
- not child-centric because the money collected to help meet the costs of raising the child does not benefit the child or family. This is inconsistent with the policy intent and does not provide a positive incentive for liable parents to meet their child support obligations.

In many countries, child support payments are passed on in part or in full to parents with children receiving welfare payments. New Zealand stands out internationally in not passing on any child support, unless child support payments exceed welfare payments or, for example, re-partnered clients.<sup>38,39</sup>

In New Zealand, recent analysis suggests pass-on would improve outcomes following separation of parents. Pass-on would reduce the decline in living standards, ameliorating poverty rates, and reducing the gap in the impact of separation between parents with care of children (mostly women) and paying parents (mostly men).<sup>40</sup>

<sup>40</sup> Ibid.

### *Tensions with the Child Support Act 1991*

Child support payments are intended to support the child for which they are paid, not the caring parent. As child support is only passed on if it is above the rate of sole parent benefit, it is the cost of benefit for both the caring parent's and the child that is being "offset".

The underlying purpose of child support is to ensure that children are supported and that parents are held responsible for the financial support of their children. When the government retains child support, the ability to which these payments can support children is severely limited.

### *Child support pass-on is an opportunity to contribute to a fairer, more child-centric welfare system*

Currently, sole parent beneficiaries are treated differently in the welfare system from other recipients of child support payments. Child support payments are retained by the Government to offset benefit costs for sole parent beneficiaries who are receiving carers. Other parents, such as re-partnered parents or parents only receiving supplementary assistance, have their child support payments passed on to them. [36]

Currently, the Child Support Act 1991 requires sole parent beneficiaries to apply for child support under a formula assessment with Inland Revenue. Sole parent beneficiaries are not permitted to enter into a voluntary agreement administered by Inland Revenue.

The resulting payments are retained by the Government to offset the cost of the benefit. Usually, the benefit is more than the child support payable. In cases where the child support exceeds the benefit, the excess is passed on to the sole parent.

These rules do not apply to people who are on a couple rate of benefit and who have children in their care from a previous relationship. They can choose whether to apply for child support under the Child Support Act 1991 (formula assessment or voluntary agreement) or make private agreements. If they do apply for child support, all child support payments are passed on to them rather than being retained to cover benefit costs. Their child support payments and private agreements are treated as income, and benefits are abated accordingly when the income is declared.

[36]

### *Improved relationships between liable parent and child/ren*

Research suggests that there is an increased incentive, and therefore likelihood, of child support payments being made by liable parents where they can see that their child will receive the benefit of their financial support.<sup>41</sup>

Research also suggests that child support payments that are passed on are associated with increased engagement and interaction between liable parents and their children.<sup>42</sup>

### *Links between child poverty and mental health*

Various studies have shown a relationship between poverty experienced in childhood and a greater likelihood of mental health problems throughout their life.

New Zealand has four major longitudinal studies following cohorts of children born in New Zealand which give insights into possible links between experiences of poverty in childhood and later mental health problems.

The Dunedin Multidisciplinary Study which began in 1972 found that, compared with those from high socioeconomic status (SES) backgrounds, children who grew up in low SES families had poorer cardiovascular and periodontal health, and a higher incidence of substance abuse; and these were not changed if the children improved their SES later.<sup>43</sup>

Findings from the Christchurch Health and Development Study, which started in the mid-1970s, suggest that a low standard of living, together with a number of other features of childhood adversity<sup>44</sup> may increase the likelihood of mental health problems in adulthood.<sup>45</sup>

More recent data from the Growing Up in New Zealand longitudinal study, which began in 2009, showed that risk factors for vulnerability of children included maternal characteristics and behaviours, features of the home environment and poor maternal mental wellbeing and physical health in late pregnancy. Exposure to multiple risk factors for vulnerability at any one time point increased the likelihood that children will experience poor health outcomes during their first 1,000 days of development; and that Māori and Pacific babies are disproportionately exposed to these risk factors.<sup>46</sup>

The Pacific Islands Family Study, which began in 2000, found a relatively high prevalence (7.3 percent) of depressive symptoms in 9-year-old Pacific children; there was no relationship to SES apart from low maternal education.<sup>47</sup> A major New Zealand report in 2011 “Reducing social and psychological morbidity during adolescence” identified poverty as one of several factors influencing mental health of adolescents and the importance of early intervention.<sup>48</sup>

The evidence strongly suggests that the incidence of mental health conditions among children and adolescents can be reduced by addressing severe and persistent poverty, particularly during the early years of a child’s life.

### *Women and Māori may benefit from passing on child support*

MSD administrative data shows that 95,700 sole parent families were receiving a relevant sole parent rate of benefit as of September 2021.

Women make up 88 percent of all sole parent beneficiaries (around 84,200 of sole parent families receiving a relevant sole parent rate of benefit) and will be positively impacted by passing on child support.

Māori make up 49 percent of sole parent families likely to be impacted (20,300 of the 41,550) by passing on child support. Māori make up a much larger proportion of sole parent families than of the general population, and those families will see increases in their income.

### *Disabled people may benefit from passing on child support*

Disabled people are more likely than others not to be employed and therefore to be on benefit, so disabled sole parents are more likely to be reliant on their benefit to help support them as parents. Passing on child support to sole parent beneficiaries will improve the financial circumstances of many sole parents and their families.

Most importantly, disabled children and their families, whether with a disabled parent or a non-disabled parent, are more likely to experience barriers and to have higher costs associated with their disability, than others. Therefore, disabled children are more likely than non-disabled children to benefit from the proposed policy shift.

Supported Living Payment is the main benefit type for people who have a long-term health condition or disability. There are approximately 3,800 people receiving Supported Living Payments-related benefits who may benefit from passing on child support.

### *Temporary Additional Support does not consider child support an allowable cost for formula assessments*

Temporary Additional Support (and the Special Benefit) is a 'last resort' form of hardship assistance for people who cannot meet their ongoing essential costs (allowable costs) from their income. Once a parent is made liable for child support, legally they must make the payments they have been assessed to pay. Child support is an obligatory cost however it is not currently included in the comparison of costs and income. Therefore, the parent, along with any children in their care, ends up with a larger income deficit.

Sole parent beneficiary clients are currently obligated to apply for child support and are required to complete a formula assessment which calculates a payment based on the incomes of the parents and the amount of care each parent has for the child. However, it is proposed that the obligation to apply for formula assessments is intended to be removed. Clients will be able to choose the best form of child support agreement for themselves (i.e., formula assessment, voluntary agreement, or private agreement). Child support obligations under a voluntary agreement or private arrangement may be for more or less than under a formula assessment.

[36]

Any clients in these situations could apply for a formula assessment and have it included as an allowable cost in their Temporary Additional Support. Therefore, only child support liabilities raised under a formula assessment are proposed to be included as an allowable cost for Temporary Additional Support.

## Policy problems involved in treating child support as income

### *Passing on child support will decrease Income Related Rent Subsidies for some clients*

Income-Related Rent is a subsidised rent scheme for public housing<sup>49</sup> tenants with low incomes. MSD calculates the rate of Income-Related Rent, and the provider charges this rate as subsidised rent to the client. MSD pays the provider an Income-Related Rent Subsidy to cover the difference between the value of the Income-Related Rent and the market rent rate or agreed rent rate for their properties. Child support administered via Inland Revenue is considered “assessable income”<sup>50</sup> for the purposes of calculating the rate of Income-Related Rent and eligibility for public housing.

Treating child support as income for the sole parent beneficiary would likely decrease clients' Subsidy, meaning they will be required to contribute more to their rental costs. 1261

### *Without the use of automation significant resources would be required to support sole parent beneficiaries to declare their income*

Clients have an obligation under the Social Security Act 2018 to inform MSD if they have any change in circumstances. This includes any changes to their income, which is used to determine the rate of financial assistance payable.

MSD's current practice is to charge the expected amount of child support a client will receive. This means that if the liable parent does not pay, a client can have their benefit abated unnecessarily.

Regular information sharing and the automation of how child support income is charged would be required to mitigate the expansion of resources required to manage the influx of sole parent beneficiaries declaring their income. This would also improve clients experience by removing the expectation that they contact MSD to declare child support income, so sole parent beneficiaries (and potentially other clients) could rely consent to accurate child support income information being provided instead. However, this would not be necessary if child support was treated as income for the child.

### *Other clients receiving child support will be impacted if child support is treated as income of the receiving carer and charging is automated*

Child support payments are currently passed on to some clients, including re-partnered clients (who are receiving child support for children in their care from a previous relationship), clients only receiving supplementary assistance, and sole parents whose child support payments exceed the sole parent rate of benefit (which is not common). Re-partnered clients and clients only receiving supplementary support receive the full amount of their child support entitlement, whereas sole parent beneficiaries receive the difference between their rate of main benefit and the amount of their child support payment (called an excess payment). Their main benefit is not abated by any excess payment because the total rate of benefit has already been retained by the Government.

---

<sup>49</sup> Public housing providers include Kāinga Ora and approved community housing providers.

<sup>50</sup> Assessable income is the estimate of a client's net weekly income from all sources (after the deduction of any Accident Compensation Corporation premiums or levies).

If automated, the charging of income would be applied to all clients in receipt of child support from Inland Revenue. This would be a change in approach for some existing clients. When information sharing is used to charge the actual amount of child support paid as income, any clients who do not currently declare their child support payments as income (which they are expected to under the Social Security Act 2018) may experience a reduction in their monthly income.<sup>51</sup>

### What objectives are sought in relation to the policy problem?

The objectives of passing on child support to sole parent beneficiaries are:

- to treat them more fairly <sup>(36)</sup> and minimise the creation of new inequities,
- to increase the adequacy of financial resources for sole parent beneficiaries to support children,
- to reduce the number of children in poverty, and
- to reduce barriers for liable parents to pay child support.

## Section 2: Deciding upon an option to address the policy problem

### What criteria will be used to compare options to the status quo?

The following principles were identified to assess the package of changes proposed for child support pass-on:

- **fairness or equity** – is the option ‘fair’ in how it treats the child support payments for different families and how does the option align with the purposes of the Child Support Act 1991 and the Social Security Act 2018,
- **child-centred** – what are the possible impacts on the child (including child poverty levels),
- **behavioural impacts** – what are the possible impacts on compliance with the Child Support Act 1991 and the Social Security Act 2018,
- **certainty of income** – how will the option impact on people’s ability to manage their week-to-week income and what impact will it have on client debt,
- **administrative ease** – how easy or complex will the option be in developing and implementing, as well as the client experience, and
- **cost** – implementation and ongoing costs.

### What scope will options be considered within?

- The child support (Inland Revenue) and welfare (MSD) systems.
- Previous options proposed to, and in-principle decisions made by, the Minister for Social Development (and Employment<sup>52</sup>) and the Minister of Revenue.

---

<sup>51</sup> Preliminary analysis undertaken in 2019 showed that up to 95 percent of clients who received child support did not declare their child support payments as income.

<sup>52</sup> Some decisions were made when by the Minister for Social Development, others by the Minister for Social Development and Employment.

Out of scope

- Inland Revenue’s policy settings and the rules guiding the assessment of child support obligations.
- How child support payments are used by the receiving carer for the benefit of the child.

### What options are being considered?

The following two options were not considered:

- retaining child support to offset the cost of all beneficiaries would increase material hardship for beneficiaries already receiving child support and create further inequity between the treatment of beneficiaries and working population, and
- not treating child support as income for benefit abatement purposes would operate similarly to Option 3. Under option 3, child support would be treated as income of the child. Therefore, under Option 3, benefits would not abate as the income is not that of the receiving carer.

### Option 1 – Child support is not passed-on to sole parent beneficiaries [*status quo*]

Without which there would be no:

- correction of the inequity for sole parent beneficiaries,
- increase in the incomes of sole parent beneficiaries,
- reduction in child poverty,
- increased incentive for liable parents to pay child support,
- cost of implementation, and
- adjustments required by parents.

### Option 2 – full pass-on, and treating child support as income for benefit purposes [MSD’s preferred option]

Child support payments would be passed on to sole parent beneficiaries instead of being retained by the Government to offset the cost of benefit payments. Child support would be treated as income for benefit purposes.

*The overall cost of the preferred option is estimated to be \$354.27 million over the forecast period 2021/2022 to 2025/2026*

Costs and savings for the Government:

- \$458.63 million is the cost of passing on child support (that is, no longer retaining child support to offset the cost of income-tested financial assistance),
- \$25.42 million is the cost for enabling child support liability to be considered allowable costs for Temporary Additional Support (and Special Benefit) purposes
- (\$174.15) million in savings from benefit abatement (due to increased incomes from passing on child support payments), and
- (\$25.58) million in savings due to how child support is treated for the purposes of Income Related Rent Subsidy).

Government investment in the project:

- \$3.65 million in one-off costs (business design and IT requirements, monitoring and evaluation, FTEs for implementation),
- \$42.10 million in ongoing costs (communication, depreciation, capital charge, FTEs for contact centres, processing staff and other support staff), and
- \$20.20 million for the IT build.

### *Modelling of impacts*

Based on the modelling of matched MSD and Inland Revenue data, of a total 95,700 sole parent families approximately 50,800 families are estimated to be affected (that is, clients who have child support payments due). The remaining 44,900 have not or cannot apply for child support. The latter group includes widows/widowers, people who are not required to apply<sup>53</sup>, and people who chose not to apply for child support either before or after the 2020 removal of the sanctions<sup>54</sup> on sole parent beneficiaries who do not identify the other parent and apply for child support. Of the 50,800 families estimated to be impacted:

- Around 41,550 sole parent families will benefit financially by an average of \$65 per week, with a median gain of \$24 per week. Approximately 1,000 parents will see weekly gains of \$200 or more per week.
- Around 4,000 sole parent families will see no immediate gain because the liable parent does not pay child support.
- Around 50 sole parent families are expected to lose financially from child support pass-on due to a combination of factors. Around half of those families are expected to lose financially due to the loss of their main benefit and the Winter Energy Payment. The other families are expected to lose due to a combination of reductions in their Temporary Additional Support, Income-Related Rent Subsidy and Childcare Assistance, with most losses less than \$10 per week.
- Around 5,200 families will see no immediate gain due to the child support payments abating their benefit payments.

More than half of the 41,550 sole parent families (21,900) that will benefit financially will have no reduction in their financial assistance as a result of having their child support payments passed on. Another 32 percent (13,200) will retain between 50-99% of their child support income, with the rest reducing the amount of financial assistance payable.

### *Women, Māori, Pacific families and disabled people are expected to benefit from Option 2*

Women make up 88 percent of all sole parent beneficiaries (around 84,200) and will be positively impacted by passing on child support.

Māori are expected to gain by \$52 per week, with a median gain of \$20 per week. However, this increase is less than the average and median of all families (\$65 and \$24 per week, respectively). The lower-than-average increase is due to lower average child support payments by liable parents. The amount of child support paid under a formula assessment is determined by the incomes of the parents. It is likely these liable parents pay less because they have a lower income.

---

<sup>53</sup> As outlined in section 9(5B) of the Child Support Act 1991.

<sup>54</sup> The section 192 sanction in the Social Security Act 2018 was repealed on 1 April 2020 as one component of the Income Support Package.

Pacific families make up around 3,700 of the 41,550 sole parent families likely to be impacted. They are expected to gain by more than the average and median of all families at an average of \$69 per week, with a median gain of \$33 per week. This is because increases in income depend on the amount of child support paid, and for Pacific families, these average payments are higher than for other impacted sole parent families as a whole.

Supported Living Payment is the main benefit type for people who have a long-term health condition or disability. There are approximately 3,800 people receiving Supported Living Payment-related benefits who may benefit from child support pass-on. MSD have compared the Supported Living Payment group in terms of average child support payment and amount of child support retained after abatement on a weekly basis. Those receiving Supported Living Payment-related benefits are expected to gain on average more than the average of all families (\$76), and gain by the same median amount (\$24) per week.

Most importantly, compared to others, disabled children and their families (whether with a disabled parent or a non-disabled parent) are more likely to experience barriers and to have higher costs, associated with their disability. Therefore, disabled children are more likely than non-disabled children to benefit from the proposed policy shift.

*There will be a reduction in child poverty levels*

It is estimated that child support pass-on will reduce child poverty by around 7,000 (+/-2,000) children on the fixed-line AHC50 measure,<sup>55</sup> and by around 5,000 (+/-2,000) children on the BHC50 measure<sup>56</sup> in the 2023/24 financial year.<sup>57</sup>

This will contribute to the Government's ten-year longer-term targets to reduce material hardship from 13.3 percent of children to 6 percent – a reduction of around 80,000 children.

*The automation of income charging rules will accurately reflect benefit entitlement for re-partnered clients and clients only receiving supplementary assistance*

Preliminary analysis undertaken in 2019 showed that up to 95 percent of clients who received child support did not declare their child support payments as income. The automation of information sharing and of charging income will impact clients who do not currently declare their child support income.

The number of other clients receiving child support currently is 921 re-partnered clients and 10,415 clients only receiving supplementary assistance. Of these clients, 58 percent of re-partnered clients and 59 percent of clients only receiving supplementary assistance are expected to experience a reduction of their benefit entitlement because child support payments exceed the income abatement thresholds. The remainder of the clients will experience no reduction in benefit supplementary assistance. For those clients who experience a reduction in financial assistance, this is in line with their current obligations (to declare all sources of income) and the policy intent.

---

<sup>55</sup> AHC50 measures the number of children in households with incomes much lower than a typical 2018 household, after they pay for housing costs, and is measured by the threshold line set at 50 percent of the median income in 2017/2018 (base financial year), after housing costs are removed.

<sup>56</sup> BHC50 is a moving-line income measure, with the poverty threshold taken the year the data is gathered (low income, before housing costs – moving-line measure). BHC50 measures the number of children in households with much lower incomes than a typical household, and is measured by the threshold line set at 50 percent of the median household income in the year measured.

<sup>57</sup> These figures are based on Treasury's tax and welfare analysis modelling.

The combined impact to these client groups is expected to result in approximately \$30 million in savings from net benefit abatement (from abating their child support income).

*Passing on child support will decrease the Income-Related Rent Subsidy for some clients*

Approximately 8,900 clients receiving Income-Related Rent would see a decrease in their Subsidy as a result of child support pass-on, meaning they will be required to contribute more to their rental costs. The median decrease would be \$5.00, and the average decrease \$11.92. It is estimated that the decrease in Income-Related Rent Subsidy would save the Government \$21.58 million over five years.

Further work is required to achieve these savings by ensuring all child support payments can be considered income in line with the policy intent.<sup>58</sup> This will involve changes to operational guidance, practice and potentially IT systems. These changes will be made prior to the implementation of child support pass-on.

**Option 3 – full pass-on, but treating child support as income for the child**

Child support payments would be disregarded as income for the parent or the carer and instead would be treated within the benefit system as income for the child. This would have a greater impact on reducing child poverty than Option 2 as the carer would still effectively receive all child support on behalf of the child. It would also require significantly less resources in the IT build, as well as less ongoing resources for MSD. However, there would be no savings from benefit abatement. In addition, new operational policies and processes would still be required to be designed to reflect the policy change.

[36]

This option also raises equity concerns, as people who receive large sums of child support could still be eligible for a benefit.

Pursuing Option 3 would also raise wider questions around what is considered income in the welfare system and would require significant work and careful consideration of the flow-on implications.

**Option 4 – partial pass-on**

Partial pass-on would mean that instead of the full amount of child support being passed on to receiving carers, a maximum amount (for example, \$20) per week would be passed on, and any remainder would be retained by the Government to offset the cost of these benefits.

and there would be a smaller reduction of child poverty. It would also be significantly more complex for Inland Revenue to implement than Option 2.

---

<sup>58</sup> The policy responsibility for IRR and public housing eligibility sits with the Ministry of Housing and Urban Development.

## Options 2 – 4 share the same policy requirements

Based on the previous decisions by the Minister for Social Development, and the Minister of Revenue<sup>59</sup>, implementing Options 2-4 involve:

- removing the obligation for social security beneficiaries to apply for child support (under section 9 of the Child Support Act 1991),
- retaining child support for recipients of the Unsupported Child's Benefit and Foster Care Allowance [33]
- making child support an allowable cost for liable parents applying for Temporary Additional Support (hardship assistance that is income- and asset-tested).

## Consistencies between Options 2 and 4

### *Requirements for IT infrastructure and business processes*

Including:

- automation as part of child support pass-on [26]

It also involves significant investment and building of IT infrastructure to support information sharing and automation of non-discretionary business processes, and

- child support being charged forward, as income, over the following four or five weeks of benefit payments, from when the child support is paid. As child support is paid monthly and benefit payments are paid more frequently, Ministers<sup>60</sup> agreed that spreading the charge of child support over this period would reduce the fluctuations of income for the client.

*Child support payments should be charged forward<sup>61</sup> as income over the four or five weeks from when child support is paid to the client.*

This ensures that clients are not disadvantaged by child support payments received before they become entitled to income-tested assistance.

Child support payments represent a monthly period whereas payment of benefits represent a weekly or fortnightly period. Using four or five weeks is the equivalent period of the monthly child support payments in the welfare payment system and was considered the most appropriate timeframe to charge the payment over because it is reflective of the period for which the payment was paid over. A strict application of the charging forward rule could lead to financial assistance being abated due to child support received over a month before a client is granted assistance.

This would unfairly disadvantage new clients, who are unlikely to anticipate this and therefore may have already spent their child support payment. It also creates a precedent to retrospectively include income that relates to a period before a client is entitled to, and accruing, assistance.

---

<sup>59</sup> Previous Minister of Revenue, Hon Stuart Nash.

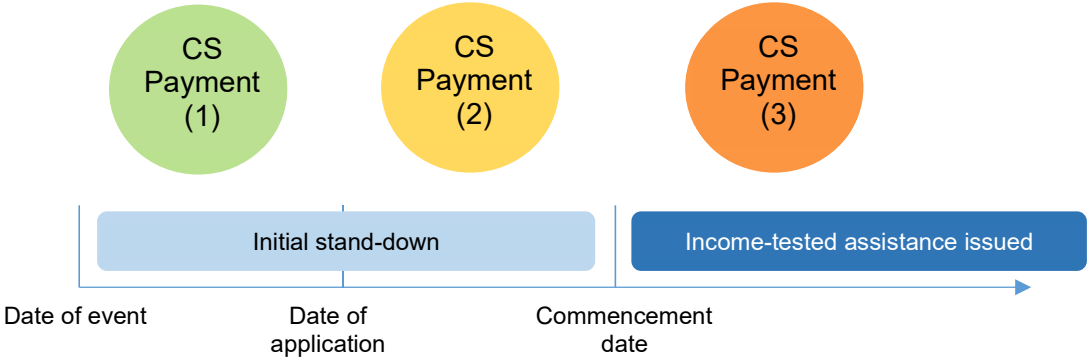

<sup>60</sup> Previous Minister of Revenue, Hon Stuart Nash, and Minister of Social Development, Hon Carmel Sepuloni.

<sup>61</sup> Charging forward: distributing the child support payment received by Inland Revenue (paid monthly) across the next four to five weeks of financial assistance received by the client.

Therefore, child support payments would be charged forward against financial assistance if received on or after the earliest commencement date for any financial assistance the client receives. Note the commencement date can be earlier than when they apply for assistance if the 28-day rule applies.<sup>62</sup>

For example, in the diagram below, child support (CS) Payments (1) and (2) would not be treated as income, but CS payment (3) would be. Existing income charges for child support would continue if the client transferred to another income-tested assistance.

*Diagram One: Charging child support income for clients who previously were not receiving income-tested assistance*

*MSD would automate the charging of child support income based on child support payment information shared by Inland Revenue*

For child support payments administered by Inland Revenue (formula assessments and voluntary agreements), it is proposed that payment information shared with MSD will be matched with MSD clients' identities. This information will contain details of what has been passed on to receiving carers by Inland Revenue.<sup>63</sup> From this information, MSD would automate charging of child support as income when determining the amount of financial assistance payable. Information sharing between Inland Revenue and MSD occurs pursuant to the current Approved Information Sharing Agreement between the agencies.

This would remove the need for clients with child support arrangements administered by Inland Revenue to regularly declare the child support payments they receive as income. This would reduce the compliance burden for clients and improve the consistency and accuracy of income charging.

Child support payments under a private arrangement are not administered by Inland Revenue so clients receiving these payments will still need to regularly declare them.

[36]

<sup>62</sup> The 28-day rule allows clients in certain circumstances to have a commencement date earlier than their application date, if they apply within 28 days of the date on which the person becomes entitled to the benefit.

<sup>63</sup> There will be a data cleansing exercise between MSD and Inland Revenue to update Inland Revenue numbers on MSD records to help support higher data matching between our agencies.

The process of automated decision-making would be governed by MSD's automated decision-making standard which will provide safeguards to ensure automation for child support pass-on is lawful, aligns with policy intent and is implemented in accordance with MSD's Privacy, Human Rights and Ethics Framework.

Clients who already receive child support through Inland Revenue would also be impacted by child support pass-on. Re-partnered clients and clients not on a main benefit but who are receiving supplementary assistance, receive the full amount of their child support payments. Sole parent beneficiaries receive the difference between their rate of main benefit and the amount of their child support payment (called an excess payment) which is not charged as income as the total rate of benefit has already been retained by the Crown.

However, with child support pass-on child support will be paid to a range of clients, and as such clients may find the amount of financial assistance payable is reduced (or abated) as all child support payments will be treated as income.

In addition, the automation and income charging rules would apply to a range of MSD clients in receipt of child support from Inland Revenue. This will be a change in approach for some existing clients. When information sharing is used to charge the actual amount of child support paid as income, any clients who do not currently declare their child support payments as income (which they are expected to under the Social Security Act 2018) may experience a reduction in their financial assistance.<sup>64</sup>

This will occur if the child support payments exceed the income abatement threshold amounts or if they receive Temporary Additional Support. While these are intended consequences, some clients may struggle with this transition.

The number of clients receiving child support currently is approximately 900 re-partnered clients and 10,400 non-beneficiaries. Of these clients, 58 percent of re-partnered clients and 59 percent of non-beneficiaries are expected to experience some reduction in the amount of financial assistance payable as a result of child support payments exceeding the income abatement thresholds (approximately 6,700 in total). The remainder of the clients will

---

<sup>64</sup> Preliminary analysis undertaken in 2019 showed that up to 95 percent of clients who received child support did not declare their child support payments as income.

experience no reduction in their financial assistance. For those clients who experience a reduction in their financial assistance this flow-on is in line with their current obligations (to declare all sources of income) and the policy intent.

The combined impact to these client groups is expected to result in approximately \$30 million in savings from net benefit abatement due to taking their child support income into account.

*These following changes are intended to address inconsistencies*

Including, by:

- recognising child support as an allowable cost for liable parents receiving Temporary Additional Support (and Special Benefit),
- including re-partnered parents and clients only receiving supplementary support in the child support payment information shared by Inland Revenue for MSD to automate the charging of child support as income, and
- treating child support as income for sole parent beneficiaries receiving child support and the Income-Related Rent Subsidy. This would decrease the clients' overall subsidy and their overall income but aligns with how income should be treated.

*The automation of re-partnered parents and clients only receiving supplementary support*

Automation of income charging rules would be required to implement the proposal and would be applied to all clients in receipt of child support from Inland Revenue. This would be a change in approach for some existing clients. When information sharing is used to charge the actual amount of child support paid as income, any clients who do not currently declare their child support payments as income (which they are expected to under the Social Security Act 2018) may experience a reduction in their monthly income.

This will occur if the child support payments exceed income abatement thresholds or if they receive Temporary Additional Support. While this is the policy being implemented as intended, some clients may struggle with this transition.<sup>65</sup>

### **Comparison of the options against the status quo**

The following table uses the assessment criteria listed above to assesses Options 2 - 4 against the status quo (Option 1). Each option is scored on how it contributes to each criterion in comparison to the status quo and the high-level reasons for the score are recorded directly below each criteria score. The final assessment is provided in the final row of the table.

**Key:**

- ++ much better than doing nothing/the status quo
- + better than doing nothing/the status quo
- 0 about the same as doing nothing/the status quo
- worse than doing nothing/the status quo
- - much worse than doing nothing/the status quo

<sup>65</sup> Preliminary analysis undertaken in 2019 showed that up to 95 percent of clients who received child support did not declare their child support payments as income.

How do the options compare to the status quo?

	Option 1 – Status Quo	Option 2 – Full pass-on, child support treated as income for benefit purposes	Option 3 – Full pass-on, but treating child support as income for the child	Option 4 – Partial pass-on
<b>Equity or fairness</b>	0	++ + Removal of inequity for sole parent beneficiaries + All child support charged as income (equity with other clients) <sup>66</sup>	- + Removal of inequity for sole parent beneficiaries - Parents who receive large sums of child support still eligible for financial assistance - Treats sole parent beneficiaries differently than other clients	- + Partial removal inequity for sole parent beneficiaries - Only entitled to a portion of child support - Treats sole parent beneficiaries differently than other clients
<b>Certainty of income</b>	0	++ + Increases income when child support is paid + Child support paid monthly will be treated as income and spread over the following four or five weeks for benefit abatement purposes	+++ + Increases income when child support is paid + + Benefits more stable as not abated by child support payments	++ + Increases income when child support is paid + Child support paid monthly will be treated as income and spread over the following four or five weeks for benefit abatement purposes
<b>Behavioural impact</b>	0	0 + Liable parents incentivised to pay child support - Likely drop in child support applications, as application becomes voluntary	0 + Liable parents incentivised to pay child support (all child support received by carer) - Likely drop in child support applications, as application becomes voluntary	0 + Liable parents may be incentivised to pay child support - Likely drop in child support applications, as application becomes voluntary
<b>Child-centred</b>	0	+ + Provides more financial resources for sole parents when paid	++ + + Provides substantial financial resources for sole parents when paid (as benefit not abated because of child support)	+ + Provides limited additional financial resources for sole parents
<b>Administrative ease</b>	0	0 + Reduces burden to self-declare income due to Inland Revenue/MSD automation of child support info share - Requires ongoing additional staff	0 + Client does not need to declare child support - Requires ongoing additional staff	0 + Reduces burden to self-declare income due to Inland Revenue/MSD automation of child support info share - Requires ongoing additional staff
<b>Cost</b>	0	-- - Loss of Government revenue (child support) + Child support abatement gains - Investment in IT build required - Requires additional ongoing costs (Inland Revenue and MSD)	-- - Loss of Government revenue (child support) - Minor investment in IT build and some additional ongoing costs (Inland Revenue and MSD)	-- + Child support abatement gains - Investment in IT build required - Requires additional ongoing costs (Inland Revenue and MSD)
<b>Overall assessment</b>	0	+++	++	+

<sup>66</sup> Except for recipients of the Unsupported Child's Benefit and Foster Care Allowance as Oranga Tamariki—Ministry for Children is currently undertaking work to reform the system of financial assistance and support for caregivers.

## What option is likely to best address the problem, meet the policy objectives, and deliver the highest net benefits?

Option 2, with the payments taken into account for benefit income tests (including supplementary assistance), is considered to be the option most likely to meet the policy objectives.

A summary of our assessment of the proposal is set out in the table below:

<b>Criteria</b>	<b>Equity or fairness</b>	<b>Certainty of income</b>	<b>Behavioural impact</b>	<b>Child-centred</b>	<b>Administrative ease</b>
<b>Assessment</b>	<p>Removal of inequity for sole parent beneficiaries.</p> <p>All child support charged as income equity with other clients.</p> <p>Child support treated as income for all recipients of child support.</p>	<p>Increases income when child support is paid.</p> <p>Child support paid monthly will be treated as income and spread over the following four or five weeks for benefit abatement purposes.</p>	<p>Liable parents incentivised to pay child support.</p> <p>Likely drop in child support applications, as application becomes voluntary.</p>	<p>Provides more financial resources for sole parents when paid.</p>	<p>Loss of Government revenue by not passing on child support.</p> <p>Charging child support as income provides abatement gains.</p> <p>IT build required.</p> <p>Requires additional ongoing costs for Inland Revenue and MSD.</p>

The removal of inequity <sup>1361</sup> the anticipated behavioural impact, and child-centred principles, and conclusions provides strong arguments for proceeding with full child support pass-on and treating child support as income for benefit abatement purposes.

The equivalent positive impacts would not be achieved through alternative policy changes such as increasing sole parent benefit rates. The key conclusions are that:

- passing on child support provides an increased incentive to apply for child support, following the removal of the former sanction which reduced benefits for sole parents who do not apply for child support,

- research suggests that passing on child support payments is associated with increased engagement and interaction between liable parents and their children,<sup>67</sup> and
- there are minimal impacts on work incentives for most clients, though there are stronger impacts on work incentives for the small number of clients with relatively high levels of child support due to them.

There are mixed results in terms of fairness, certainty of income, and administrative ease principles.

- *Fairness*: Option 2 will equalise how the benefit system treats sole parents and re-partnered parents in relation to child support. However, the proposal will impact groups differently:
  - Around 41,550 of those sole parent families will benefit financially by an average of \$65 per week, with a median gain of \$24 per week. Approximately 1000 parents will see weekly gains of \$200 or more per week.
  - Around 4,000 families will see no immediate gain, mostly because the liable parent does not pay child support. However, these families will gain if the liable parent begins to pay child support.
  - 5,200 sole parent families will see no immediate gain due to the child support payments fully abating their financial assistance.
  - The remaining 44,900 sole parent families do not, or cannot, currently apply for child support and will therefore see no benefit from child support pass-on, and there could well be a decrease in overall child support applications.<sup>68</sup> However, child support pass-on creates a positive incentive for new sole parents to apply for child support and the intention is to empower parents to make that choice.

The composition of the group gaining and losing may change depending on whether sole parents receive arrears payments of child support in any month, and if debt relates pre- or post- implementation in July 2023<sup>69</sup>.

- *Certainty of income*:
  - The potential irregularity of monthly child support payments and their interaction with the generally weekly income support system means some of those who will benefit will experience somewhat irregular changes to income based on when child support is paid (including for arrears). Where significant arrears payments are made, this can result in a larger abatement than if the child support had been paid on time, or the creation of debt. However, the

<sup>68</sup> This includes sole parents who have meet specific requirements and are therefore not required to apply for child support, widows or widowers, or those who choose not to apply.

<sup>69</sup> Child support debt accrued during the period prior to implementation will be retained by the government when repaid in the future. Therefore, there will be no impact of the repayment of debt on other income.

monthly payment will be spread over time, charging child support income forward over the following four or five weeks. Together with the use of Inland Revenue data on child support payments by MSD, the generation of debt from irregular payments should be minimised.

- Annual income assessments for some will identify that the benefit has not been sufficiently reduced, in which case a benefit debt will result and would have to be repaid.
- Some clients, particularly people who have an ongoing income deficit, may find it difficult to manage in the weeks following the receipt of a child support payment when their benefit assistance, including Temporary Additional Support, may be paid at a reduced rate. As child support is paid monthly, clients who have received a payment and are in hardship might only be able to meet their necessary costs for some of the four- or five-week period that their benefit would abate over, even with Temporary Additional Support. These issues would be exacerbated if more than one payment of child support occurred within a month, causing “stacking” of income charges. This could occur when a liable parent was in arrears and Inland Revenue passed on one or more arrears payments made after the normal monthly payment.
- *Administrative ease*: Taking child support payments into account in the benefit income test will make child support pass-on challenging to administer. This will also apply to recipients of supplementary assistance, which is income-tested. It will require significant resources for MSD’s implementation and ongoing administration, with Inland Revenue incurring small costs for implementation and administration. The complexity around certainty of income may also be difficult to communicate to clients.
  - Child support pass-on will use real-time information and automated decision-making to manage transactions, adding an additional layer of complexity to the benefit system.
  - Regarding child support as income for the child would have a higher fiscal cost but would reduce the ongoing administration costs for MSD, mitigate the significant IT changes involved, and could be delivered more quickly. However, this is a significant policy shift from the general purposes of the Social Security Act 2018 as the expectation that clients use all available resources before they seek financial assistance would no longer apply in respect to child support payments. This also raises equity concerns as people who receive large sums of child support could still be eligible for a benefit.

MSD recommended **Option 2** because it:

- would improve the fairness of the policy with respect to equalising the treatment of sole parent beneficiaries, re-partnered parents and clients receiving only supplementary assistance,
- is child centric, and
- may improve the likelihood that liable parents would meet their child support obligations.

Option 3 was not recommended as it:

- is a significant policy shift from the general purposes of the Social Security Act 2018, and

- raises equity concerns for people who receive large sums of child support, and between sole parent beneficiaries and other MSD clients.

Option 4 was not recommended as it:

- retains inequity between sole parents and re-partnered parents,
- creates administrative complexity in terms of determining what amount is appropriate to pass-on (for example, a flat rate per child or a percentage),
- reduces the amount of money available to go towards the costs of raising a child compared to Options 2 and 3, and
- could lead to a perception that the standard amount set to be passed on is the appropriate amount for liable parents to pay and carers to receive in child support and so undermines support for the child support formula.

[36]

While these arrangements would assist clients to manage the unpredictable and irregular nature of many child support payments, we are not entirely able to eliminate the likelihood that some clients will end up with periods of irregular income and end-of-year benefit debt.

Under current settings, sole parents may incur a debt with MSD when they receive an arrears payment, or a court ordered lump sum of child support because of annual income assessments of main benefit entitlement. If a sole parent or Supported Living Payment client stays on benefit for 12 months, and they have had their main benefit abated at some point, they receive an annual income assessment of benefit. Rather than considering their main benefit entitlement on a weekly basis, it is considered on a 52-week basis.

Having an annual rather than a weekly assessment is usually in the client's favour because income can be spread over a 52-week period, rather than the week it was earned. Of the annual income assessments undertaken, a recent investigation found that around 60 percent of clients have not been paid their full benefit entitlement for that 52-week period and are paid the remaining the additional benefit arrears owed to them.

However, significant child support arrears payments may lead to a debt for the parent after their annual income assessment due to the automatic income charging rules limiting the income charging of any child support payment to the following four or five weeks. This means a large payment could result in weekly benefit abatement across the four- or five-week period being less than the annual abatement.

MSD recommends that the policy settings for Temporary Additional Support (and the Special Benefit) also be amended to include child support as an allowable cost as this would:

- be more likely to provide the income needed to support the liable parent and their dependants,
- be child-centric, as it reflects that child support is meant to provide essential support for their child, and
- support liable parents in meeting their child support obligations.

## What are the marginal costs and benefits of the option?

Affected groups	Comment	Impact	Evidence Certainty
<b>Additional costs of the preferred option compared to taking no action</b>			
Regulated groups	Overall sole parent beneficiaries will have more income. However, there will still be a need to budget carefully in months when large payments are received or when they are receiving Temporary Additional Support (which reduces dollar for dollar with additional income), as their welfare assistance would be reduced over the subsequent four or five weeks.	Around 6,500 sole parents are expected to gain from child support pass-on and will have a reduction in their Temporary Additional Support.	High
Regulators	Ongoing administrative costs relating to charging child support payments as income for welfare assistance.	Approximately \$9.21 million per annum between Inland Revenue and MSD once the policy is fully implemented.	Medium
Others (e.g., wider govt, consumers, etc.)	Government no longer offsetting benefit costs by retaining child support but treating the payments as income for benefit purposes.	\$154.73 million per annum no longer retained, with \$48.74 million per annum recovered in social assistance abatement.	High
<b>Total monetised costs</b>		Total overall cost \$354.27 million from 2021/22 to 2025/26	
<b>Non-monetised costs</b>	Likely drop in child support applications, as application becomes voluntary.		
<b>Additional benefits of the preferred option compared to taking no action</b>			
Regulated groups	Additional income averaging \$65 per week for 41,550 sole parent families, and a reduction in child poverty in these families.	3,000 – 9,000 children moved out of poverty (above the 50 percent BHC and AHC measures).	High
	Additional income for some liable parents (depending on their individual expenses and income) through Temporary Additional Support.	A total of \$8.41 million per annum in additional assistance through Temporary Additional Support.	High

		Up to \$18 a week for individual liable parents. <sup>70</sup>	
Regulators	Application for child positively incentivised, as it is likely to increase incomes.	Low	Medium
	Increased incentive for receiving parents to apply for child support, leading to abatement of welfare assistance.	Low	Medium
Wider government	Increased income is associated with better whānau health and wellbeing for all affected groups.	Low	Medium
Other parties	Liable parents may be encouraged to comply with their child support obligations as they can see their payments going directly to the children for whom it is paid.		Medium
<b>Total monetised benefits</b>	Passed on child support payments	\$354.27 million from 2021/22 to 2025/26	
<b>Non-monetised benefits</b>	[36]  Improved health and wellbeing outcomes for sole parent beneficiaries and their families. Improved cognitive development and school achievement in childhood, and improved education in adulthood. Improved relationships between liable parents and their children.	Medium	

<sup>70</sup> This is the minimum rate of child support for the period 1 April 2019 to 31 March 2020, which we would usually apply to people receiving TAS.

Under current settings, some sole parents who remain on a benefit for 12 months or more may incur a debt with MSD if they receive a large arrears payment. This is because the large payment will result in weekly benefit abatement being less than the annual abatement.

In the initial period after implementation, the risk of this occurring is low since child support arrears relating to the period before the policy change will be retained by the Government in line with current policy. Over time, the likelihood of debt from large arrears payments will increase as an increasingly large proportion of arrears payments relates to the period after this policy is implemented.

## Section 3: Delivering an option

### How will the new arrangements be implemented?

#### *How the new arrangements will come into effect*

MSD formed a project team in July 2021 with the initiative requiring 24 months to design, develop and implement the business, technical and legislative changes. The initiative is working towards a July 2023 implementation date. Inland Revenue and their child support pass-on project team was formed in late November 2021 following the move of child support to START (Inland Revenue's new technology platform).

The scale of the IT change means that the IT build needs to occur concurrently with the legislative amendment process. If there are substantive changes made to core policy decisions at the select committee stage, the IT build could require further funding and time to meet the new requirements.

#### *The charging of child support payments as income for sole parent beneficiaries will be automated*

[36]

The automation of processes and non-discretionary decisions will minimise manual tasks that staff might otherwise be required to make.

A crucial component of child support pass-on is the automation of the sharing of child support payment information and charging of child support as income for benefit abatement purposes. [36]

For income testing purposes, the payments will be treated as if they were spread across the following 4 or 5 weeks – depending on the number of benefit paydays in the month. For example, the system will be designed to treat a \$200 child support monthly payment as if it was four payments of \$50 each (if there were four benefit paydays in the month) or five payments of \$40 each (if five paydays in the month). Current implementation assumptions are:

- Budget funding, including for 2022/2023 will be obtained for implementation,
- [36]
- implementation on 1 July 2023,
- child support will be charged as income against benefits and other financial assistance - this maintains the status quo across the welfare system [36]  
Working for Families tax credits, Income Related Rents and Community Services Card,

- the charging of income against benefits and other financial assistance would be automated,
- IT changes will be required to both Inland Revenue and MSD systems,
- a data-sharing system between Inland Revenue and MSD will be required, and
- the 10-day notice period for an adverse action will be waived through an amendment to the Approved Information Sharing Agreement between Inland Revenue and MSD, enabling MSD to charge child support payments as soon as possible to avoid the creation of debt for clients.

### *Implementation risks*

Overall, officials consider that child support pass-on is a high-risk project.

Officials consider that the commencement date of 1 July 2023 has the following implementation risks:

- Operational errors: MSD's preparation is taking place on a shortened timeframe, which has led to the simultaneous development of operational policy, business process, business and system requirements, and drafting instructions for legislation. Generally, there is a staged approach to this development.
  - Mitigation: Early involvement of experts from privacy teams, legal, IT etc. to co-design the policy and business processes means that the most feasible options can be worked through to operationalise the high-level policy objectives. Inland Revenue has also partnered with MSD to test and progress these options. Key policy direction will be sought as the project progresses and we will work with key stakeholders, including the Office of the Privacy Commissioner, to address any issues raised.
- Implementation date: The changes will require complex system changes. The timing is tight for system design and testing. The implementation date would be at risk if any policy, operational, or legislative issues arose that required reworking of the MSD IT system.
  - Mitigation: Contingency (financial and resourcing) has been built into both the legislative process and the IT build as they run concurrently. If there are minor legislative changes through that process, the IT build can reflect these and still deliver. Each risk has an assigned owner, and a set of controls and mitigation strategies will be developed to manage or minimise their impact.

## How will the new arrangements be monitored, evaluated, and reviewed?

The proposal includes \$0.45 million in the two years following implementation for evaluation. The evaluation will be undertaken by MSD and use a mix of qualitative and quantitative methods to examine the impact of the changes, including how clients and staff are experiencing the changes.

Child support pass-on is a major financial initiative which could have significant impacts for sole parent beneficiaries and their children and should therefore be evaluated. MSD has current evaluation and reporting underway to assess the impacts of the welfare overhaul work programme, including the Families Package and subsequent changes. This includes annual reporting tracking trends in relevant payments, as well as additional research on the quantitative impacts of these payments, and qualitative and quantitative studies to gain insights into client experience. Inland Revenue will also undertake a process evaluation to measure the effectiveness of the initiative. We consider this will be appropriate for identifying any problems that may arise during implementation. It will also monitor key metrics relating to this initiative, including changes to the number of child support applications, the amount of child support received, and the amount of child support arrears (excluding penalties).

In addition, MSD has secured further funding to include:

- additional monitoring, and impact evaluation if feasible, focused on changes in claims, private agreements, formula assessments, the proportion of liable parents making payments, and levels and frequency of payments; and
- an in-depth qualitative study of people's experiences of the changes, with a focus on sole parent beneficiaries' experiences of having to budget with fluctuating incomes (for example, where their liable parent is unreliable at making regular payments), clients' experience of child support payments automatically being charged forward over four or five-weeks, and sole parents', liable parents' and their children's wellbeing, their perceptions of the quality of their relationships, and changes they see in the short-term.
